SUMMARY

Full-stack Developer building scalable, production-ready web applications end to end. From backend systems to user facing interfaces. Focused on writing clean, maintainable architecture that scales well as products grow.

PROJECTS

Relay - AI Powered Gmail & Calendar | relay.bhavaynagpal.com 2026

Next.js, PostgreSQL, Drizzle ORM, OpenAI Agents SDK, Corsair, Clerk

- Architected an **AI-powered productivity workspace** that unifies Gmail and Google Calendar into a single dashboard, paired with a conversational assistant for managing both directly through natural language.
- Developed a multi-tenant Next.js application using Corsair for OAuth and token management, and the **OpenAI Agents SDK for tool-calling**, while caching provider data in PostgreSQL via Drizzle ORM.
- Enforced a **human-in-the-loop** review step across all AI-driven actions, so every email or calendar change is first drafted as a proposal and only executes once the user gives explicit confirmation.

Pollaris - Real time poll intelligence | pollaris.bhavaynagpal.com 2026

React, Express, MongoDB, Socket.IO, Redis, Better Auth

- Developed a **real-time polling platform** where creators publish multi-question polls with a searchable, filterable, and sortable dashboard, and instantly watch responses stream into a live analytics view.
- Designed an Express and MongoDB backend with Socket.IO for **live updates**, and a custom **Redis-backed distributed lock** with automatic TTL renewal to safely serialize submissions across multiple server instances.
- Prevented duplicate voting for both signed-in and anonymous respondents using unique database constraints, giving creators reliable, tamper-resistant poll results they can consistently trust and act on.

MyTube - Modern Video Platform | mytube.bhavaynagpal.com 2026

React, Express, MongoDB, Redux Toolkit, JWT, Cloudinary

- Developed a YouTube-style video platform where users can upload, discover, watch, and interact with videos, while also following creators, building playlists, tracking watch history, and posting tweet-style updates.
- Architected a full MERN application with **JWT-based authentication**, Cloudinary-backed media uploads, and MongoDB aggregation pipelines for search, filtering, and trending or related video recommendations.
- Delivered a complete social video experience with likes, comments, subscriptions, and watch history, letting users both consume and publish content through a responsive, theme-aware interface.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL
Frontend: React, Next.js, Tailwind CSS, Shadcn/ui
Backend: Node.js, Express.js, REST API, Drizzle ORM, Mongoose
Database: MongoDB, PostgreSQL
Tools: AWS, GCP, Redis, Docker, Socket.IO, Git

CERTIFICATIONS

Web Dev Cohort (Chai Code) 2026

- A full-stack development program covering fundamentals through advanced backend and deployment concepts.

Get started using Google analytics (Skillshop) 2024

- A Google certification validating skills in tracking, analyzing, and reporting website and app data using GA4.

EDUCATION

Manav Rachna International Institute 2020 - 2023
Bachelor of Arts (Journalism and Mass Communication) *Faridabad, Haryana*

O P Jindal Modern School 2019 - 2020
Higher Secondary Education *Hisar, Haryana*
